

About Introduction of SUGA

We would like you to post information of SUGA's Corporate Introduction following;

SUGA, established in 1920, has been specialized in manufacturing Weather Meters, Corrosion Test Instruments and Optical Property Measuring Instruments.

Weather Meters

To predict the deterioration of products and materials by simulating indoor and outdoor conditions of sun light, rain, wind, temperature and humidity in the laboratory, SUGA offers a broad range of weather meters such as using the global standard light sources and advanced super-accelerating ones.

- Xenon weather meters
- Sunshine weather meters
- Metaling Weather Meters

Corrosion Test Instruments

To determine the corrosion resistance of materials and their finishing, SUGA offers various test instruments.

- Salt Spray Test Instruments
- Cyclic Corrosion Test Instruments
- Gas Corrosion Test Instruments

Optical Property Measuring Instruments

To determine the optical property and to show numerical data of colour and texture, SUGA offers various instruments. They are used in a lot of fields such as product management, research and development and so on.

- Colour Meters
- Gloss Meters
- Haze Meters
- Image Clarity Meters
